Summary

Senior Software Engineer with 6+ years of experience designing and delivering enterprise-grade financial and capital markets applications. Proven expertise in leading UI teams, developing full-stack cloud-native systems, and integrating real-time architectures using modern frameworks and cloud platforms.

Skills

Languages: Java, Kotlin, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks/Libraries: Spring Boot, Spring Batch, React, Angular, Microsoft FAST Web Components, AG Grid, JUnit, Mockito, MockK

Cloud & DevOps: AWS, Docker, OpenShift (Red Hat), Jenkins, Git, Maven, Gradle, CI/CD

Databases & Messaging: PostgreSQL, MongoDB, Oracle, Redis, IBM MQ, AMPS, Coherence

Tools: IntelliJ, VS Code, Postman, Swagger UI, Splunk, Apache Camel

Concepts: Microservices, REST APIs, Real-time systems, Event-driven Architecture, Trading workflows

Experience

Senior Software Engineer

04/2023 – Present

Genesis Global Fintech | Charlotte, NC

- Collaborated on a trade allocation manager application, integrating multi-asset trade data, workflows, and vendor systems to monitor and manage full trade lifecycles using Java and Kotlin.
- Engineered a data pipeline converting real-time DB changes into IBM MQ messages for client delivery.
- Designed and built a credit asset tracking app end-to-end as the sole frontend developer using custom Microsoft FAST web components and contributing to backend integrations.
- Containerized and deployed the application to multi-regional OpenShift clusters using Docker, achieving adoption across multiple internal teams and enabling multiple follow-on client contracts worth \$100k+ each.
- Developed a high-throughput, low-latency trading monitoring app with Java/Kotlin and AMPS, handling millions of messages daily.
- Built responsive dashboards with custom web components and Golden Layout, enabling analysts to efficiently monitor orders, executions, alerts, and TCA metrics.

Software Engineer

03/2022 – 04/2023

Genesis Global Fintech | Charlotte, NC

- Led UI development for an ETF Portfolio Pricing application as Lead Frontend Engineer, managing a team of 7 developers.
- Built and deployed an AWS-based microsite for client investor e-consent, handling secure document uploads via S3, parsing with Apache Camel, and automated email distribution.
- Developed a Java/Kotlin flex options pricing app leveraging FIX messaging, Excel parsing, and SMTP alerts.

Applications Programmer

06/2020 – 03/2022

Wells Fargo Securities | Charlotte, NC

- Implemented a Spring Batch pipeline aggregating ETF pricing from 20+ sources into a central Coherence cache, delivering data via REST APIs to front-desk users.
- Collaborated on a Java-based bond pricing API replacing third-party tools and reducing vendor costs.
- Developed a full-stack Spring Boot REST API with Angular front-end, retrieving credit data from databases and using Redis caching to boost performance.

Technology Analyst

01/2019 – 06/2020

Wells Fargo Securities | Charlotte, NC

- Contributed to the development of a production-grade credit e-trading application using Spring Boot and Java-based microservices.
- Implemented an SFTP data ingestion pipeline with Spring Batch, parsing CSV files into Oracle databases.
- Automated CSV ingestion into databases via Python + scheduled tasks.

Technology Analyst Intern

06/2018 – 08/2018

Wells Fargo Securities | Charlotte, NC

- Integrated SQL queries with Tableau to deliver interactive reports and dashboards for front-office traders.

Education

Bachelors of Science in Computer Science

12/2018

Florida International University | Miami, FL
